My Philosophy of Education

Throughout my life I have come to realize that there are only measurable truths in the world. Knowledge and these truths are needed to succeed in society which is why education and teachers are important. Education exists to teach students common knowledge, teacher's needs to clearly instruct the students, and those students need to actively attempt to reason the concepts. My philosophy of education is that there is a core of knowledge that learners need to memorize, be able to explain, and experimentally test with the teacher's structure and guidance.

The purpose of education is to teach the students a limited set of truths through empirical methods so that the learners can function properly in society. I teach because my students make up the future society. The future members of society need to know facts that are measurable and related to the world in order to excel. My goal for the students is for them to be capable of memorizing and understanding facts so that they are able to represent the facts in their own ways. In my experience learners learn best with a combination of hands on activities, repetition of facts, and clear instruction. With repetition and instruction the student will be able to participate in society.

As an educator it is my role to clearly and precisely describe common concepts to my students while leading them through empirical activities to logically explain the concepts. Since I

lecture and lead group activities the desks will be in small groups facing the front of the classroom. In these experiments students will learn to respect and help each other decide upon a conclusion. The students will measuring tools, computers, and other forms of technology to test out the facts that they learn. My curriculum will be centered on acquisitions of facts based on empirical observations and measurement of the world. If a student can logically process the facts then they should be able to reproduce the facts through different mediums like oral, test, and presentation which are where computers will be needed. Unbiased tests will be given as a medium to assess if the student is learning because they serve as a medium. Since I will be using many different mediums also to teach diverse students and individuals will have a higher chance of understanding. All my students will be eager learners who will enjoy facts and experiments and ask for help if needed.

The student has to be active throughout their education. The students should take the facts I lecture to them and then participate in experiments to help them understand it better. I believe every student should strive to memorize the facts and then be able to explore them empirically to better understand while respectfully interacting with the other students. I expect the students to practice the ideas so that they will be able to apply the ideas to themselves and the world. Students should also be able to come to the teacher with questions and realize that the teacher is mainly in control of guiding them. Overall the student will try their best to listen and understand.

Knowledge and logic are the keys to success. Without knowledge and logic it is difficult to live in our society. Education and teachers exists to teach the students how to attain limited facts and understand them. I believe all students need lectures and experiments to learn the facts they need to become active members of society.
